

Guidance regarding preventive medications for which the Patient Protection and Affordable Care Act (PPACA) mandates no member cost share.

PPACA prohibits certain benefit plans from charging members any cost share for **in-network** preventive services, including certain preventive medications. This PPACA requirement does not apply to all benefit plans, and does not apply to any grandfathered plans. If you do not know whether your plan is subject to this requirement, please contact BCBSAZ.

Remember that the cost share waiver applies only when the medications are obtained from an in-network provider.

The United States Preventive Services Task Force has identified the medications listed below as the recommended preventive medications for adults and children. Some of these medications qualify for no cost share only when prescribed by the member's treating provider.

The medications followed by "PL" have Prescription Limitations or Precertification as stated in your benefit plan booklet. To learn more about Prescription Limitations and Precertification, please [click here](#).

ASPIRIN

Member cost-share: \$0

Aspirin (PL)

Chew tablet: 75mg, 81mg
Tablet: 81mg, 162mg, 325mg
